

# Digital Wallet User Behavior and Lifetime Value Analysis

## Objective

The objective of this project was to analyze whether age group influences payment method preference and transaction frequency among digital wallet users.

## Sample Size

The study was conducted using data collected from **641 digital wallet users**.

## Tools Used

- IBM SPSS

## Key Statistical Tests Performed

- Chi-Square Test of Independence
- One-Way ANOVA
- Normality Tests:
  - Kolmogorov-Smirnov Test
  - Shapiro-Wilk Test

## Key Variables Analyzed

- Lifetime Value (LTV)
- Total Transactions
- Total Spent
- Preferred Payment Method
- Age Group

## Main Findings

The analysis showed that age group does not significantly influence preferred payment method or transaction frequency among digital wallet users.

## **Conclusion**

The results suggest that digital payment behavior has largely converged across different generations, indicating similar usage patterns regardless of age group.
